

CHAPTER V

CONCLUSION & SUGGESTIONS

5.1. Conclusion

Based on the non-thesis project entitled *The Lungs*, the writer can conclude several points, such as:

1. A short story is one of the forms of creative writing. Unlike the novel, a short story only focuses on some characters and events. A short story has a simpler plot than a novel. A short story has formal elements, such as character & characterization, plot, theme, settings, and point of view.
2. Romance is one of the genres that developed from the chivalric periods until now. Different from other genres, romance talks about the love story or relationship between the main characters.
3. In the short story that the writer makes, the writer also mentions a disease called *Asthma*. Asthma is a disease in the human respiratory tract with a marked chronic inflammatory disorder in the human tract.

5.2. Suggestion

After writing this non-thesis project, the writer realizes that there are some suggestions for the readers, i.e.:

1. For society, let's generate interest in reading some book either it is fiction or non-fiction. By reading some books, we can enhance some brain functions.
2. For the reader, the writer suggests the readers take advantage of this short story.
